# **FEATURES**

### **BF-030S**

- The board size is W1300mm × H920mm-large enough to show all the ideas that you discuss during your meetings, without any omissions.
- Information on the large screen can be copied immediately onto a sheet of A4/Letter paper. Those who attend a meeting can concentrate on the subject, as there is no need to waste time jotting down notes.
- The board screen can be slid easily, and it is a simple user-friendly unit with a power cord storage hook that comes in handy when moving the unit, a powder tray enabling easy disposal of powder, etc.
- The BF-030S can be easily upgraded for use with your PC (with optional PC interface board)

### **BF-030W**

- The board size is W1800mm × H920mm-large enough to show all the ideas that you discuss during your meetings, without any omissions.
- Information on the large screen can be copied immediately onto a sheet of A4/Letter paper. Those who attend a meeting can concentrate on the subject, as there is no need to waste time jotting down notes.
- The board screen can be slid easily, and, the powder tray is designed for easy disposal of powder.
- The BF-030W can be easily upgraded for use with your PC (with optional PC interface board)

## **BF-035**

- The 1300mm(51")W × 920mm(36")H writing surface provides ample space to record all information discussed during meetings.
- Since the unit can instantly print an A4/Letter sized copy of what is on the panel, your audience is freed from distracting note taking and can fully concentrate on the subject at hand.
- This unit has been designed with 4 writing panels (page 1-4) which can be printed out. The 5th panel is designed for use as a projection screen only.
- The BF-035 can be easily upgraded for use with your PC (with optional PC interface board)

**CAUTION**: Please do not write on the 5th panel (projection screen) as it is non-erasable and will stain.

# **SPECIFICATIONS**

				<b>DF</b> 005		
	Item	BF-030S BF-030W		BF-035		
Board s	urface size	W1300 × H920 mm (51-3/16 × 36 inch) W1800 × H920 mm (71 × 36 inch)		W1300 × H920 mm (51-3/16 × 36 inch)		
Effective	e reading size	W1240 $\times$ H880 mm (48-7/8 $\times$ 34-3/4 inch)	W1740×H880 mm (68-1/2×34-3/4 inch)	W1240×H800 mm (48-7/8×34-3/4 inch)

\*Specifications are subject to change without notice for improvement.

Placing this unit next to equipment or buildings (such as broadcasting stations) where strong RF interference is generated may sometimes cause printing to become blurred or disordered when copies are made. This does not indicate a breakdown or problem in this unit.

# **CONTROL FUNCTIONS**

#### **BF-030S OPERATION PANEL**

#### **BF-030W OPERATION PANEL**

(A) Opening button	Press this button to open the printer hatch when replacing the thermal paper.
B Power switch	Press "I" to turn ON the power when starting machine operation.
© Power lamp	Press the switch, and the green lamp will blink on and off. The lamp will stay lit (green) when the read sensor inside the machine is ready for operation.
Paper warning lamp	When the thermal paper has run out, the red lamp will light. Load new recording paper.
E A4 reduction copy key	This is used when copying one page of the screen at a reduced size onto A4 paper. At this time, the copy is reduced horizontally.

(F) A4-L copy key	This is used when one page of the screen is copied onto A4-L paper. The machine produces a copy at a reduced scale of the same length and breadth.
G Repeat key	For use with optional PC interface kit.
H PC COPY key	For use with optional PC interface kit.
① Feed/stop key	This is used when the screen slides to the left. Pressing this key advances the screen by one page and then automatically stops. Pressing the key while the board screen is being moved stops it immediately. This can also be used when paper has run out and must be refilled. If this key is pressed during the copying operation, the copying performance ends and the printer stops.

#### **BF-035 OPERATION PANEL**

	PLUS BOARDFAX BF-035				
OPEN	BCDEE	F G H	C PAGE-R SCREEN		
A Opening button	Press this button to open the printer hatch when replacing the thermal paper.	D PAGE-L key	<ul> <li>Press this key to slide the panel to the left. (Press once for each panel you wish to turn to.)</li> </ul>		
B Power switch	Press "I" to turn ON the power when starting machine operation.	G Copy key	The panel displayed will be printed out on A4/Letter sized thermal paper. The print out		
© Power lamp Press the switch, and the green lamp will blink on and off. The lamp will stay lit (green)			will be reduced proportionally to the original information on the panel.		
	when the read sensor inside the machine is ready for operation.	(H) Repeat key	You can make another copy of the last panel by pressing this key. The panel will not move		
D Paper warning lamp	When the thermal paper has run out, the		while the unit is reprinting.		
	red lamp will light. Load new recording	$\oplus$ PC COPY key For use with optional PC interface kit.			
paper.		J PAGE-R key	. Press this key to slide the panel to the right. (Press once for each panel you wish to turn to.)		
	indicates the page to which the unit is turning to. (The SCREEN is indicated by an orange lamp.)	${\mathbb K}$ Screen key	Press this key to move to the fifth panel. The unit will not move to the fifth panel with the PAGE-L key. Press the SCREEN key again to return to page 1.		

### **MAINTENANCE/HOW TO STORE**

Carry out the following maintenance procedures periodically to ensure high quality copying performance at all times.

(1) Cleaning of the surface ...... (BF-030S/W only)

When the surface gets stained, wipe it off with a slightly damp cloth. Also, if the stain is particularly stubborn, use a solution of water-thinned neutral detergent to wipe it off. Do not start using the machine until the sheet has completely dried.

(2) Cleaning of pages 1-4 ..... (BF-035 only)

When the surface gets stained, wipe it off with a slightly damp cloth. Also, if the stain is particularly stubborn, use a solution of water-thinned neutral detergent to clean. Do not start using the machine until the panel has completely dried.

- (3) Cleaning of projection screen (page 5) .......... (BF-035 only)Wipe ordinary stains in the same manner as shown in (1).If something is written on this screen by accident, wipe it off with a cloth dampened with a neutral detergent.
- (4) Cleaning of tray and decorative frame

### HANDLING PRECAUTIONS

#### <FOR SAFE USE>

- 1. Avoid placing the machine in hot spots where it is exposed to direct sunlight or where an air conditioning duct.
- 2. When using sticky tape on the surface of the board screen, do not leave it on for a long time. Moreover, after removing it, wipe the screen clean. Do not hit or pierce the board screen with any hard or sharp objects.
- 3. Do not leave writing or marks on the board screen for a long time since it sometimes become difficult to erase (BF-030S/W only).
- 4. Be careful not to stain the joints of the board screen as there have been very rare cases where such stains have been copied. ..... (BF-030S/W only)
- 5. Do not leave writing or marks on pages 1-4 for a long time since it may become difficult to erase. ..... (BF-035 only)
- 6. As thinner, benzine, alcohol, etc., may discolor or mark the main unit and the board screen, never use such chemicals when cleaning. (BF-030S/W only)
- 7. As thinner, benzine, alcohol, etc., may discolor or mark the main unit and the panels, (1-4 page) never use such chemicals when cleaning. ...... (BF-035 only)
- 8. Use only the correct type of thermal paper.
- When replacing recording paper, do not place any objects on the open printer cover or do not put your elbows on it.
   After use, make sure to turn OFF the power switch. In addition, when it is not to be used for a long time, make certain that the plug of the power cord is pulled out form the outlet.
- 11. Always use the correct type of marker. Be careful not to use other markers as the sheet may be damaged or, in some cases, the ink may be difficult to remove.
- 12. Write within an area of a size that can be easily read.

13. When moving this machine, turn OFF the caster lock switches, hold both the right and the left sides of the main unit firmly, and avoid any sudden jolts or shocks.

When storing thermal recording paper, avoid the following places. This is important because storage in such places may cause color development or discoloration.

(1) Places where the paper is exposed to direct sunlight.

(2) Places where the paper is exposed to temperatures of more than 35°C (95°F) and humidity of 85% or over.

(3) Places adjacent to alcohol, thinner, benzine, ammonia, etc.

## CHECK LIST OF SIMPLE FAILURES

#### <BEFORE ASKING FOR A REPAIR SERVICE>

CONDITIONS	CHECKPOINTS
When the power fails	Check if power cord is pulled out of outlet.
When pressing copy key does not result in copying	Check if paper warning lamp (red) is lit.
Although printer is functioning, nothing is copied on	Check if winding direction of recording paper is set on
recording paper	reverse. (No copying is made on back of recording paper)
When characters written on board screen cannot be	Check if any marker except the correct type has been used.
rubbed out even by the use of an eraser	Wipe off with a damp cloth or neutral detergent.
When characters written on the panel cannot be erased	If something is written on page 5 by accident, wipe it off
even using an eraser	with a cloth dampened with neutral detergent. Check if any
	marker except the correct type has been used to write on
	pages 1-4. Wipe off with a damp cloth or neutral detergent.
	Check for ink residue on the screen. If it is stained, wipe
When copy is dirty	off carefully with a soft damp cloth.

\* If no satisfactory result can be achieved even after the above, contact the suppliers or our company.

# MAIN-BOARD SETTING TABLE

### 1. MAIN-board $\ensuremath{\textcircled{}}$

Sections marked # are set with shorting pins.

Model	Туре	Switch panel	J3	Jumper J4	setting J5	J6	Remarks
BF-030S	2 surfaces/standard/A4	1)					
	2 surfaces/standard/letter		#				
BF-030W	2 surfaces/wide/A4	3)			#		
	2 surfaces/wide/letter		#		#		
BF-035S	5 surfaces/standard/A4	5)				#	
	5 surfaces/standard/letter		#			#	

#### 2. MAIN-board 2

\* Set with solder shorts.

J7: BF-030/035 (PC) series

#### 3. PC board (reference)

\* Set on the BF main unit the PC board is connected to J1: BF-030S/W (PC)

J2: BF-035S (PC)

# **OPERATION PANEL VIEWS**

#### 1. SWITCH PANEL VIEW (BF-030S)

### **ADJUSTMENT MODES**

There are the following methods for entering each mode.

(1) Adjustment 1: Switch on the power while holding down SW5.

(2) Adjustment 2: Switch on the power while holding down SW1 and SW4.

To end an adjustment mode, switch off the power and switch it back on without holding down any of the keys. (Test mode continues until the power is switched off.)

#### Adjustment mode specifications

No.	Function summary	Operation method	Adjustment 1/2/3	Remarks
1	Test pattern printing	Press SW3.	1	Both 2-surface/5-surface
2	Arbitrary sheet feed	Press SW1/SWS5.	1	5-surface only
3	Continuous sheet feed (1 surface ↔ 5 surface)	Press SW1.	2	Both 2-surface/5-surface
4	12.5% continuous printing	Press SW2.	2	Both 2-surface/5-surface
5	20% continuous printing	Press SW3.	2	Both 2-surface/5-surface
6	Test pattern printing	Press SW4.	2	Both 2-surface/5-surface
7	Continuous copying	Press SW5.	2	Both 2-surface/5-surface

\* From the left side of the operation panel, the switches are SW1 - SW6.

\* For the 5-surface model, in Adjustment 1 mode, the COPY/STOP key is for normal copy/copy stop processing, but sheet stretching/rewinding is not carried out.

#### 1. Test pattern printing

Pressing SW3 prints the test pattern shown in the print sample (same as for BF-030).

Each time SW3 is pressed, the printing is repeated. The STOP key is enabled.

#### 2. Arbitrary sheet feed (5-surface only)

(1)Pressing the L-FEED/R-FEED key alone feeds the sheet about 1 cm left/right (with the motor driven at low speed).

If you hold the key down for longer than 0.5 second, the sheet is fed continuously left/right until you release the key.

- (2) If you press the R-FEED key while holding down the STOP key the sheet latch is released/set. When the sheet latch is set, all the LEDs except the paper end LED lights up (to show that the paper tube can be turned manually).
  - <Notes>
  - . These modes do not manage the pages with the CPU, so be careful when working near the edge of the sheet.
  - . The sheet is not stretched after the sheet feed operations.
  - . When the sheet latch is set, the sheet is not fed other than for 1-cm feeds (Item 1).
  - . When the sheet is fed at positions where the paper tube is thick, the movement distance decreases due to insufficient torque.
  - . The fluorescent lamp is always lit. (It is not extinguished even if the gain check result is NG.)

#### 3. Continuous sheet feed

After a power-on reset, pressing SW1 feeds the sheet continuously.

The interval between surfaces is about 2 seconds. For the 5-surface model, the sheet is stretched each time a surface is fed.

Continuous feed is an unending loop that continues until the power is switched off. (The STOP key is disabled.)

#### 4. 12.5% continuous printing

Pressing SW2 continuously prints a black belt (about 10 mm) diagonal line at intervals about 12.5% of the paper width.

The interval for each sheet is about 2 seconds.

# 5. Pressing SW2 continuously prints the same as for Item 4, but with intervals of 20%.

#### 6. Test pattern printing

Pressing SW4 prints the test pattern. The STOP key is disabled.

#### 7. Continuous copying

Switching on the power in Adjustment Mode 2 and pressing SW5 automatically starts continuous copying operations.

The interval between surfaces is 3 seconds.

For a 5-surface model, from Surface 1 to Surface 4 is copied and after these four surfaces have been copied, the sheet is returned non-stop to Surface 1 and consecutive copying resumes.

Continuous feed is an unending loop that continues until the power is switched off. (The STOP key is disabled.)

#### Hidden mode

For a 5-surface model, if the power is switched on with SW5 and SW6 held down, the sheet latch is released.

### **CCD BOARD ADJUSTMENT**

#### 1. Initialization

1) Range setting of oscilloscope

CH1	100 mV/div. (for 10:1 probe)
CH2	20 mV/div. (for 10:1 probe)
Time base	0.5 ms
Coupling DC	

2) Connect the probe to the test pin on the main board.

CH1	J9
CH2	J1
CH3	J10
GND	J2

The trigger source for Channel 3 coupling is AC.

3) GND position adjustment (See the figure on the right.) Immediately after the oscilloscope power is switched on, the ground position fluctuates easily, so occasionally check that the Channel 1 coupling is aligned to ground.

#### 2. Temporarily Fixing of Lens Unit

- •Fix SC(1) temporarily by the adjustment of the back plate and end face.
- •Fix SC(2) temporarily in the horizontal state.
- Fix SC(3) temporarily in the center position.
- Fix SC(4) temporarily with the CCD board put in the vertical state.
- •Fix SC(5) (square screw) temporarily in the position where the lens barrel is 2 mm forward from the holder.
- Fix the shade temporarily in the position where it was brought near the sheet.
- \* Adjustment mode

Switch on the power while holding down the STOP key (BF030S/W) or the PAGE-R key (BF-035).

#### 3. Optical Axis Alignment

- 1) Loosen SC(2) and shake the board forward and backward until the waveform on the oscilloscope is as shown in the figure. (Saturation)
  - 3.8 V or more
  - 3 ms or more (6 divisions)

2) Slide the lens shade to adjust the amount of light so that the aperture peak waveform is flat, then secure the lens shade in place. (See the figure on the right.)

Adjustment range (limit values)	2.6-3.4 V
Adjustment standard	3.3 V
Be careful not to exceed the top	limit of 3.8 V.

1) As shown in the figure, enter a pattern, obtained when 50 mm square was divided into 36 equal parts, in the

red vertical line and the upper and lower ruled lines

4. Focus Adjustment

of two lines of 3 mm in width.

corresponding position.

5. Reading Width Adjustment

1) Adjustment reference value: 890 to 910 mm

value.

#### \_ \_ 50 x 50 mm Pattern with 36 equal divisions Ruled line = Red vertical line = Ħ =

2) Reading width adjustment

- Loosen SC(3) and adjust so that the reference line in the figure is uniformly copied in the vertical direction while shaking the lens unit upward and downward. After that, fix SC(3).
- If the reading value is higher than the reference value, loosen SC(1) and move the whole lens unit to the right. If it is lower than the reference value, mode the whole lens unit to the left.

#### 6. Optical axis alignment

- •As shown in the figure, enter a mark on the block vertical line and at a point 71 mm away from the black line.
- Move the sheet until the mark moves to the left edge. (The vertical line is reflected in the center of the mirror.)

•Move SCs 2 and 4 to make the waveform shown in the figure.

#### 7. Shade adjustment

- Switch the power off, then switch it back on in normal mode.
- •Make two waveforms appear on the oscilloscope.
- •Set the oscilloscope mode to Chop.
- Channel 1 The gain is automatically adjusted and the waveform amplitude becomes larger.
- Channel 2 The actual waveform (The waveform in the figure has a different ground level from Channel 1.)

#### 8. Print check

Focus:

- $\bullet$  If the waveform is tilted, flatten it with the shade. (Align to 3.0-3.5 V.)
- •Tighten the SCs.
- •Check that the print patterns are copied within the standards.
- Reading width: 890-910 mm

2 lines with widths of 3 mm must be printed.

Also, the measurement grid must not be broken.

Others: After copying one surface, check that there are no dark lines on the copy.

#### **Cautions for Maintenance**

- In principle, when lens units and CCD boards are replaced in the field, use a factory-adjusted unit (lens unit + CCD board).
- · Procedure for adjustment after replacement
- (1) Temporarily secure the adjusted unit with SC1.
- (2) Check the light shaft alignment.
- (3) After adjusting the reading width, secure the unit with SC1.
- (4) Check printing.

# TROUBLESHOOTING

Item	Trouble	Cause	Correction
1	The power will not turn on and no	1. Power is not reaching the outlet.	1. Check the breaker.

### DISASSEMBLY

#### 1. Board Main Unit Disassembly

- 1) Remove the frame cover unit.
  - •Remove the two screws [M] and two screws [U] (three screws for 030).
  - •Remove the main harness and the power relay harness.
  - •Remove the frame cover unit.

#### 2) Remove the back panel.

- •Remove the ten screws [T] and remove back panel corner B.
- •Slide the back panel and remove it.

#### 3) Remove the sheet frame unit (BF-030S/W)

- •Remove the four screws [U].
- •Remove the sheet motor connector.
- •Remove the sheet unit from the sheet from hangar.

#### 4) Remove the sheet frame unit (BF-035)

- •Remove the rear side screw [D].
- •Remove the board motor solenoid harness from the main board and remove the cable.
- •Remove the four screws [U].
- •Remove the sheet unit from the sheet from hangar.

Sheet paper tube

# 2. Removing the Sheet

#### BF-030S/W

- •Lock the top and bottom slide bases.
- •Move the sheet to the top and remove it from the sheet frame.
- •When mounting the sheet, place it against the roller flange and mount slowly.
- (Be careful not to scratch the sheet.)

#### BF-035

- •Remove the two screws [T] and remove both the top and bottom sheet guides.
- •Remove the four screws [B] and remove both angles.
- •Remove the two screws [G] and release the lever plate.
- •Remove the sheet paper tube on one side and wind up the sheet.
- •Remove the other sheet paper tube.

Paper tube

pressure knob

Fixing screw

#### BF-035 Solenoid

- •Remove the harness wire bundle.
- •Remove the two screws [A] and remove the solenoid.

#### Servo motor

- •Remove the harness wire bundle.
- •Remove the four screws [N] and remove the motor.
- \*During installation, be careful about the motor belt tension. 15

#### **4. Removing Internal Parts**

#### Remove the main board.

- •Remove the harnesses connected to the main board.
- •Restrain the locking card spacer and remove the main board.

#### Remove the power board.

- •Remove the power supply relay harness, the secondary side power supply harness, and the lamp harness.
- •Remove the four screws [H].

#### Remove the CCD board.

- •Remove the cable ties around the CCD board.
- •Remove the two screws [I] and remove the CCD board together with the lens holder.

#### Remove the fluorescent lamp.

- •Loosen the two screws [J] and remove both the top and bottom auxiliary mirror plates.
- Turn the fluorescent lamp and remove it to the front.

#### **5. Printer Disassembly**

- 1) Remove the printer unit from the frame cover.
  - •Remove the four screws [O] and remove the printer unit from the frame cover.

#### 2) Remove the printer rear cover.

- •Remove the four screws [C] and the nine screws [S].
- •Remove the power supply cord from the main switch and remove the rear cover.

#### 3) Remove the switch panel and switch board.

- •Remove the switch board harness from the subboard.
- •Remove the cable tie.
- •Remove the four hooks from the printer cover and remove the switch panel.
- •Remove the four screws [Q] and remove the switch board.

#### 4) Remove the sub-board paper switch

- Remove the harnesses connected to the sub-board.
  Remove the four screws [Q] and remove the sub-board.
- •Remove the two screws [P] and remove the paper switch.

#### 5) Remove the front cover and platen roller.

- •Remove the two front cover springs.
- •Remove the two hinge plate L and R E rings [c].
- •Remove the four screws [R] and remove the front cover.
- •Remove the platen roller from the hinge plate.

#### 6) Remove the printer frame.

- •Remove the two screws [R].
- •Remove the printer frame from the printer cover.

#### 7) Remove the printer motor.

•Remove the two screws [B] and remove the printer motor.

#### 8) Remove the thermal head.

- •Remove the two control harnesses for the thermal head.
- •Remove the screw [K] and the head fastening collar.
- •Remove the head fastening screw and remove the thermal head installation base.
- Remove the two screws [F] and remove the thermal head from the installation base.
