

DUAL STYLE

Introducing an effective meeting room layout

We are in **meeting society** and well-designed meeting rooms are crucial for any organizations to perform productive and collaborative meetings. Today “Displays” are used as a core meeting equipment to share information among meeting participants. However, to encourage more collaboration and productivity, it is also key to use a tool which **quickly visualizes such as inspirations, ideas, plans, flow charts, and decisions** generated from meeting attendees. **The PLUS Electronic Copyboards** perfectly perform to those requirements.

Output Display

Input Copyboard

Share information

Visualize inspirations, ideas, plans, flow charts, decisions!

Copyboard with an optional stand.

IDEAL meeting combination

Install a **PLUS Electronic Copyboard** alongside a display to create a single focus from meeting attendees. Such single focus promotes more concentration and streamlines meeting flow. Draw onto the board whatever inspires meeting attendees. As no individual note-taking is required, simply focus discussion and information on the board to create a collaborative atmosphere. At the end of a meeting, press a save button of a Copyboard to save and share written notes on the board. No photo taking, no time to wait for meeting minutes, take immediate actions straight out of a meeting room!

PLUS N-20 Series Copyboard Usage

Network

Connect to a network via an ethernet cable. There are two options for saving and sharing your information over the network.

- 1) Save your written notes on the board to **the board's internal memory**. Your team can access the images on the board from their computers using a web browser.
- 2) You can save the information on the board to a **FTP server** so that everyone on your team has access to the saved information.

Print in Colors

Print directly to a connected printer in 4 colors on plain paper. You can also choose to print in black and white.

Directly save to a computer

With a USB cable connection, save your information on the board straight to your computer. No special software is needed.

Save to a USB memory stick

With a USB memory stick inserted, push a button to save the information written on the board as a digital image file.
